

1 Import JPEG Graphics

BaKoMa TeX imports images in JPEG format. For $\text{\LaTeX} 2_{\epsilon}$ users import command looks very simple:

```
\documentclass[a4paper]{article}
\usepackage{graphicx}
\begin{document}
\includegraphics[width=\textwidth]{protvino.jpg}
\end{document}
```

Importing JPEG graphics into PDF files is implemented via DCT filter, which reach the best compression factor and avoid any lostages.
